Name : Nithil Matthew Jude Tamilselvan

Year / Branch / Section : 2nd year, Computer Science and Design

University Register No. : 2116251701036

College Roll No. : 251701036

Semester : 3rd Semester

Academic Year : 2026-2027

1-Number of Zeros in a Given Array

Started on	Wednesday, 30 September 2026, 9:28 PM
State	Finished
Completed on	Wednesday, 30 September 2026, 9:30 PM
Time taken	2 mins 31 secs
Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100%**)

Question 1 Correct Mark 1.00 out of 1.00 Flag question

Problem Statement

Given an array of 1s and 0s this has all 1s first followed by all 0s. Aim is to find the number of 0s. Write a program using Divide and Conquer to Count the number of zeroes in the given array.

Input Format

First Line Contains Integer m – Size of array

Next m lines Contains m numbers – Elements of an array

Output Format

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>

int getFirstZeroIndex(int arr[], int low, int high) {
    if (low > high) {
        return -1;
    }

    int mid = low + (high - low) / 2;

    if (arr[mid] == 0 && (mid == 0 || arr[mid - 1] == 1)) {
        return mid;
    }

    if (arr[mid] == 1) {
        return getFirstZeroIndex(arr, mid + 1, high);
    } else {
        return getFirstZeroIndex(arr, low, mid - 1);
    }
}

int main() {
    int m;
    if (scanf("%d", &m) != 1) {
        return 0;
    }

    int arr[m];
    for (int i = 0; i < m; i++) {
        scanf("%d", &arr[i]);
    }

    int firstZero = getFirstZeroIndex(arr, 0, m - 1);

    if (firstZero == -1) {
        printf("0\n");
    } else {
        printf("%d\n", m - firstZero);
    }

    return 0;
}
```

	Input	Expected	Got	
✔	5 1 1 1 0 0	2	2	✔
✔	10 1 1 1 1 1 1 1 1 1 1	0	0	✔
✔	8 0 0 0 0 0 0 0 0	8	8	✔

CS23331-DAA-2025-CSD / 2-Majority Element

2-Majority Element

Started on	Wednesday, 30 September 2026, 9:32 PM
State	Finished
Completed on	Wednesday, 30 September 2026, 9:35 PM
Time taken	3 mins 6 secs
Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100%**)

Question 1 Correct Mark 1.00 out of 1.00 Flag question

Given an array `nums` of size `n`, return *the majority element.*

The majority element is the element that appears more than `⌊n / 2⌋` times. You may assume that the majority element always exists in the array.

Example 1:

```
Input: nums = [3,2,3]
```

Input: nums = [3,2,3]

Output: 3

Example 2:

Input: nums = [2,2,1,1,1,2,2]

Output: 2

Constraints:

- n == nums.length
- 1 <= n <= 5 * 10^4
- -2^{31} <= nums[i] <= $2^{31} - 1$

For example:

Input	Result
3 3 2 3	3
7 2 2 1 1 1 2 2	2

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>

int main() {
    int n;
    if (scanf("%d", &n) != 1) return 0;

    int candidate = 0;
    int count = 0;

    for (int i = 0; i < n; i++) {
        int num;
        scanf("%d", &num);
```

```c

int main() {
    int n;
    if (scanf("%d", &n) != 1) return 0;

    int candidate = 0;
    int count = 0;

    for (int i = 0; i < n; i++) {
        int num;
        scanf("%d", &num);

        if (count == 0) {
            candidate = num;
        }

        if (num == candidate) {
            count++;
        } else {
            count--;
        }
    }

    printf("%d\n", candidate);
    return 0;
}
```

	Input	Expected	Got	
✔	3 3 2 3	3	3	✔

Passed all tests! ✔

Correct

Question 1 | Correct Mark 1.00 out of 1.00 Flag question

Problem Statement:

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Value for x

Output Format

First Line Contains Integer – Floor value for x

Answer: (penalty regime: 0 %)

```c
#include<stdio.h>
int findfloor(int a[],int low,int high,int x){
    if(low>high){
        return -1;
    }

    int mid = (high+low)/2;

    if(a[mid]==x){
        return a[mid];
    }

    if(a[mid]>x){
        return findfloor(a,low,mid-1,x);
    }

    int result = findfloor(a,mid+1,high,x);

    if(result==-1)
    return a[mid];

    return result;
}

int main(){
    int n,x;
    scanf("%d",&n);
    int a[n];

    for(int i=0;i<n;i++)
    scanf("%d",&a[i]);

    scanf("%d",&x);

    printf("%d",findfloor(a,0,n-1,x));
    return 0;
}
```

	Input	Expected	Got

Question 1

Correct Mark 1.00 out of 1.00 Flag question

Problem Statement:

Given a sorted array of integers say arr[] and a number x. Write a recursive program using divide and conquer strategy to check if there exist two elements in the array whose sum = x. If there exist such two elements then return the numbers, otherwise print as “No”.

Note: Write a Divide and Conquer Solution

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Sum Value

Output Format

First Line Contains Integer – Element1

Second Line Contains Integer – Element2 (Element 1 and Elements 2 together sums to value “x”)

Answer: (penalty regime: 0 %)

```c
#include<stdio.h>
int findpair(int a[],int low,int high,int x,int *e1,int *e2){
    if(low>=high){
        return 0;
    }
    int sum = a[low]+a[high];

    if(sum==x)
    {
        *e1 = a[low];
        *e2 = a[high];
        return 1;
    }
    if(sum<x){
        return findpair(a,low+1,high,x,e1,e2);
    }
    return findpair(a,low,high-1,x,e1,e2);
}

int main(){
    int n,x,e1,e2;
    scanf("%d",&n);

    int a[n];

    for(int i=0;i<n;i++){
        scanf("%d",&a[i]);
    }
    scanf("%d",&x);

    if(findpair(a,0,n-1,x,&e1,&e2)){
        printf("%d\n",e1);
        printf("%d\n",e2);
    }
    else{
        printf("No");
    }

}
```

	Input	Expected	Got	
✔	4 2 4 8 10 14	4 10	4 10	✔
✔	5 2 4 6 8 10 100	No	No	✔

Question 1

Correct Mark 1.00 out of 1.00 Flag question

Write a Program to Implement the Quick Sort Algorithm

Input Format:

The first line contains the no of elements in the list-n

The next n lines contain the elements.

Output:

Sorted list of elements

For example:

Input	Result
5 67 34 12 98 78	12 34 67 78 98

Answer:

```c
#include<stdio.h>

void sort(int arr[],int n){
    for(int i=0;i<n-1;i++){
        for(int j=i+1;j<n;j++){
            if(arr[i]>arr[j]){
                int temp=arr[i];
                arr[i]=arr[j];
                arr[j]=temp;
            }
        }
    }
}
int main(){
        int n;
        if(scanf("%d",&n)!=1) return 0;

        int arr[n];
        for(int i=0;i<n;i++){
            scanf("%d",&arr[i]);

        }
        sort(arr,n);

        for(int i=0;i<n;i++){
            printf("%d",arr[i]);
            if(i<n-1){
                printf(" ");
            }
        }
        printf("\n");
    }

```

	Input	Expected	Got	
✔	5 67 34 12 98 78	12 34 67 78 98	12 34 67 78 98	✔
✔	10 1 56 78 90 32 56 11 10 90 114	1 10 11 32 56 56 78 90 90 114	1 10 11 32 56 56 78 90 90 114	✔
✔	12 9 8 7 6 5 4 3 2 1 10 11 90	1 2 3 4 5 6 7 8 9 10 11 90	1 2 3 4 5 6 7 8 9 10 11 90	✔
